

Event Management — Operations & Strategy Playbook

Service Strategy

For corporate events, prioritize reliable production, AV, registration and conference logistics. For weddings, prioritize decor, catering, hospitality, photography and destination coordination. For exhibitions, prioritize booth execution, visitor flow, production timelines and vendor reliability.

City Strategy

Mumbai is a strong corporate and wedding market with high event frequency. Bengaluru is attractive for technology-sector conferences and corporate launches. Jaipur and Goa are strategic destination-wedding markets. Delhi and Hyderabad provide opportunities for exhibitions, conferences and corporate events.

Vendor Management Rules

Prefer vendors with ratings above 4.5 and on-time performance above 92% for high-value events. For large exhibitions, maintain backup production and AV vendors. Destination events should have local vendor alternatives to reduce logistics risk.

Risk Indicators

Flag events where satisfaction is below 85%, lead conversion is below 60%, or revenue is high but operational performance is weak. Such events should be reviewed for staffing, vendor quality, budget allocation, client expectation management and event complexity.

Recommended AI Analyst Outputs

For analytical questions, provide the direct answer, supporting numbers, key drivers, business implications, recommended actions and source references. The system should clearly state when the available data is insufficient rather than inventing information.
